The only washing machine **MADE IN BRITAIN**

We purchase over 2 million new washing machines every year in the UK. Can you believe that until Ebac started manufacturing washing machines in 2016 that every single one of these washing machines were imported?

2 million washing machines are imported every year

It's bad for the economy and bad for the planet. We should be making more of the products we consume in Britain.

Imports from China cause pollution

It takes over 8 tonnes of CO₂ to ship a washing machine from China to the UK. Not only that if you buy a cheap washing machine that fails after a few years and cannot be repaired, the machine enters landfill. Cheap machines cannot be repaired. They have been designed to be thrown away.

Buy British, Help the Economy and the Planet

When you buy a high quality British product from Ebac you are supporting British jobs and the economy. You are also reducing your carbon consumption quite considerably.

Starting as a 15 year old apprentice in 1959, I've now had over 60 glorious years working in manufacturing. Unfortunately over that time British manufacturing has diminished and I believe this has been bad for Britain.

We have managed to maintain a reasonable standard from businesses improving their performance, but also by financial manipulation, and selling assets and borrowing money that we can not repay.

We could change this if we put more effort into manufacturing things that we import. Unfortunately this does not suit "big business" and successive Governments have encouraged buying cheap imports even though this is making countries such as China stronger and Britain weaker.

Making goods in the UK need not cost more and the big benefit is that the money paid to UK workers stays in the UK.

In 1972 Ebac was founded by my brothers and I from virtually nothing. We always recognised that there were many stakeholders in a business. For this reason, in 2012 the ownership of Ebac was gifted to a foundation so that the business could never be sold and manufacturing would stay in the North East of England forever.

In the 40 plus years of trading we have consistently punched above our weight - supplying products to the UK army for use in Iraq, the London Underground and The Channel Tunnel. We've also sold over 1.5 million dehumidifiers.

We hope you can be part of our story and help us make the British economy strong again and give you an outstanding washing machine in the process.

Very best wishes

John Elliott MBE DL. Founder and Chairman of Ebac

outperforms the top two
market leading brands

87% Prefer Ebac to Bosch

80% Prefer Ebac to Hotpoint

Based on a survey of 187 washing machine owners June 2021.
Information correct as of 1st September 2021

Ebac Survey

In June 2021 we surveyed 187 Ebac customers after they purchased their new Ebac washing machine.

We asked them "Do you prefer your Ebac washing machine to your previous washing machine?"

An amazing 87% of former Bosch owners said they preferred their Ebac and 80% of former Hotpoint owners said they preferred their Ebac.

Bosch and Hotpoint are the two market leaders in the UK and have sold millions of washing machines over the past 20 years.

We trust the quality of our washing machines, so it comes as no surprise that over 80% of customers prefer our model to their previous washing machine.

Unique features on **EVERY** Ebac Washing Machine

7 Year Warranty

Every component backed by a full 7 year parts and labour guarantee

Durable Plastics

Stronger handle, detergent drawers and buttons.

Strong Cabinet 0.6mm Thick

Strong, robust and durable - also reduces noise.

Plasma Welded Drum

Guarantees durability with strong steel plasma welded together for a solid bond.

Powerful Brushless Motor

Spare capacity, brushless motor with no wear and tear and extremely quiet.

Digital Controls

Longer lasting digital control dials ensures minimal wear and tear.

Very Quiet Operation

Thick Steel, insulation and our brushless motor reduces noise

Large Door Opening

30% larger door opening than most brands makes loading and unloading easier.

Two Piece Drum

Repairable and serviceable unlike other brand's single piece welded drum.

High Quality Bearings

Higher quality than other brands providing greater reliability and durability.

Extra Recirculating Pump

Two pumps ensures your washing gets powerfully cleaned.

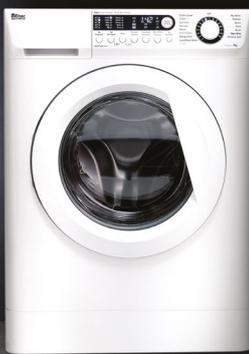

Highest Rated on Trustpilot Rated by hundreds of customers on independent review site Trustpilot as the best washing machine.

COLDFILL

washing machines

The **standard** type of washing machine in the UK, connected to a cold supply and heated during the cycle.

Programme	Recommendations
Cotton Saver	Designed for cottons, bed linen, table linen, underwear, towels, shirts etc. This wash is shorter in time and uses less energy compared to our standard cotton Eco 40-60 wash.
Eco 40-60	Designed for cottons to ensure the most efficient and best cleaning performance is achieved.
Synthetic	Designed for synthetic/polyester materials such as blouses, shirts, trousers.
Mixed	Designed for everyday mixed fabric (such as cottons with synthetics) garments. Similar colours to be washed together removing the need for separate sorting.
Drum Clean	Designed to clean your machine and keep it operating at it's optimum performance by removing internal dirt and bacteria build up.
Allergy Care	Designed to reduce and remove excess detergent from your garments – Bedding / childrens garments.
Hand/Wool Wash	Designed specifically for wool garments to ensure they are left feeling clean and soft. Please check garment label for correct washing instructions.

Programme	Recommendations
My Wash	You decide - create and store your very own favourite wash programme. That wash you always do.
Refresh	Designed to freshen up by removing odours from garments that have been worn once or are not dirty. No detergent required softener only.
Quick	Designed for small loads that require cleaning in a hurry.
Dark	Designed for dark coloured garments to maintain their original colours overtime.
Quiet *	Designed to offer a low noise wash programme for mixed fabrics – ideal to be operated during the night or in times when silence is required. The wash stops prior to spin stage and must be reactivated by the user to complete the programme.
Spin Only	Designed to remove excess water from the clothes. This is not recommended for use with delicate, wool or hand wash garments.
Rinse & Spin	Designed to remove excess water from the clothes. This is not recommended for use with delicate, wool or hand wash garments.

NB: * On the Quiet programme the wash stops prior to spin stage and must be reactivated by the user to complete the programme by pressing the start button again.

Ebac is rated the highest washing machine manufacturer on Trustpilot

Customer Reviews

"I cannot express how pleased we are with our recent purchase of an Ebac Washing Machine. It has great programmes servicing all washes and is very easy to use. The machine when working is extremely silent and at the risk of sounding that I love washing, it now is. I would recommend an Ebac washing machine without hesitation."

"British made, quiet, hot fill that shortens the cycle & easy to clean. This is the best washing machine I've ever bought. Purchase process was seamless. Full marks Ebac."

"Excellent product and British made why I bought it. Fantastic 7 warranty too. Really solid machine and great features for a great price."

Detailed specification

EBAC 8 kg

Model

- AWM86D2-WH
- AWM86D2-SR
- AWM86D2-BK

Dimensions & Weight

FAQs

What size drum do I need?

Choosing the right drum size can save you time and money by reducing the amount of wash loads, energy and water used each week.

As a general guide a 8kg machine is suitable for small homes with up to 2-3 people, while a 9kg is best for homes with 3-4 people.

A 10kg would best cater for homes with 5+ people, however this can all depend on the frequency of your washing requirements.

Does the warranty cover parts and labour?

With all Ebac washing machines, you receive a 7 year parts and labour warranty. You must register your warranty within 28 days of purchase date, full terms and conditions can be found in the terms of use section of our website.

Which wash cycle temperatures does the hot fill work on?

Hot fill has been designed to work with washes 40°C and above.

Do I need any special plumbing to use hot fill?

All you need is a hot and cold water supply at the point the washing machine will be installed.

What are the benefits of hot fill over cold only fill?

Hot fill offers faster wash cycles, lower running costs and prolongs the life of the heater element when compared to cold fill only machines.

Do I use detergent with the drum clean cycle?

No, this programme is designed to be used without any detergent.

How do you access the Pump Filter?

To access the pump filter simply push down the front kick plate cover using the indents on each side to give you complete access. We even supply a 7" drain hose to help you empty any excess water before opening the pump.

Can I stack your washing machine on top of a tumble dryer?

No, you can not stack an Ebac washing machine on top or underneath any other appliance.

Does the machine have a half load button?

Our machines have precision 360 sensor technology that automatically calculates the exact amount of water and energy required to use for each load. This replaces the need for a manual half load button.

Can I use both hot and cold water supply to the machine?

Yes, we have a selection of models that will accept both hot and cold water supplied known as hot fill available across all our ranges.

Where it all began...

On leaving school at 15, John Elliott gained an apprenticeship with a local company called Westool.

An apprenticeship to be a draftsman was a significant achievement in an environment where unemployment was high and about half of John's peers went down the local mining pits. After a 5 year apprenticeship John became a Draftsman at the age of 21.

Shortly after, John left Westool and moved to the Science Research Council's High Energy Laboratory in Rutherford. John was starting to be recognised as an innovator and, with a decade of engineering experience behind him, could devise solutions to complex problems.

After a number of years John returned to his native North East and took a position with Westair Dynamics as a Sales Application Engineer. This lasted for a couple of years, after which he was to make a decision that would change his life forever. John decided to go it alone and set up his own business of industrial dehumidifiers.

His first order was for 16 dehumidifiers designed and manufactured by John himself. John and his brothers set up the sheet metal work with a local factory and manufactured all the units in a shed - which was normally part of the poultry farm.

John delivered all 16 units to the customer on time. The customer was so pleased that they ordered another 70 units - as so Ebac was born.
